SOFTSKILLS

- Problem Solving
- Design thinking
- Teamwork & leadership
- Public speaking
- Quick learner

TOOLS

- Machine learning tools
  - KNN, Linear regression, logistic regression, decision trees, random forest, K-means, Convolution NN (CNN), Recurrent NN (RNN), Graph NN (GNN), Transformers.
- Regularisation:
  - Early stopping, Dropout, L1 & L2
- Programming Languages
  - Java, Python, C, C++, Scala.
- Cloud, DevOps & MLOps
  - Microsoft Azure, MLflow, Databricks, Docker, FastAPI, Kubernetes, Serverless, Github, CI CD.
- Spark, Hadoop, Hive, Kafka, ETL, ELT
- SQL, MongoDB, Neo4j
- Computer vision
- Pytorch, TensorFlow, Scikit-learn, Pandas, NumPy

LANGUAGES

- English (Advanced)
- French (Upper Intermediate)
- Arabic (intermediate)

PROFILE

Data Scientist/Engineer, graduated from the International University of Rabat (UIR) specializing in Big Data & AI. Passionate about mathematics, programming, and scientific discovery, with a strong interest in developing innovative and creative digital solutions.

DIPLOMAS

Computer Engineer 09-2023 / 08-2026

From the International University of Rabat (UIR), Specialized in big data & AI with CTI Accreditation

Integrated Preparatory classes 09-2021 / 06-2023

At the college of Computer Science and Digital Technology (ESIN) at UIR

Baccalaureate 09-2020 / 06-2021

Physics science baccalaureate

EXPERIENCE

Internship at Orange Business 02-2026 / 08-2026

End of study Internship, developed two apps (Market Referential, Revenue Forecasting) to predict future revenues with different approaches reducing manual revenue-forecasting time by 90%

Internship At The Ministry of Youth, Culture and Communication (IT Department) 08-2025 / 09-2025

Developed a spam detection app to find if a request should be accepted or refused

Internship at Proxisoft 07-2024 / 08-2024

A Software Development company, the main task I was given was to develop expenses handling pages for a finance app

PROJECTS

Market Referential & Revenue Forecasting 02-2026 / 08-2026

Internship, End of studies Project

Tested two complementary approaches to forecast 5-year revenue: trained a Machine Learning model reaching an R^2 of 0.6 (a strong result given skewed historical data) and built an ETL pipeline to map the revenue database against external Market CAGR estimations

Rain and Cloud Analyses 10-2025 / 01-2026

Academic Project

Our group's tasks were to create an AI model that can predict temperature and presence of rain using multiple time series ML models to find the most performant, models tested were: RNN, LSTM, ARIMA, SARIMA

SmartChess Application 06-2025 / 07-2025

Academic Project

Developed a ChatGPT-like web application powered by a trained AI agent, allows users to communicate with an AI to chat, play chess, or get information about the game based on the prompt.
